Тема 1. Preparing for your presentation

Preparing for your presentation

What do the following views on public speaking mean? Which views do you agree with most? Which ones do you disagree with?

1. Only the prepared speaker deserves to be confident. (Dale Carnegie, American writer and lecturer, 1888-1955)
2. Tell the audience what you're going to say, say it; then tell them what you've said. (Dale Carnegie, as above)
3. All the great speakers were bad speakers at first. (Ralph Waldo Emerson, American essayist and poet, 1803-1882)
4. Talk low, talk slow and don't say too much. (John Wayne, American actor and director, 1907-1979)

A. Complete the text with items from the box. You will only need six of the eight sentences given.

What you really need to think about before you face your audience

Before you actually get down to the nitty-gritty of planning the presentation itself, you need to reflect on a number of crucial questions. First of all, ask yourself what exactly your aim is. ...(1). You can then decide how many stages are necessary to get there, what the aim of each individual stage is and how each one contributes to your overall aim. ...(2) In other words, you can sift the essential data from the rest and get rid of any irrelevant or unnecessary detail.

However, content and structure are not everything. The talks we give are not just about a certain topic, they also have a specific purpose. Talks may be delivered in order to convey information, to persuade, to spur people into action or for countless other reasons. Obviously, the purpose of our talk will have a significant effect on the language we use. …(3) Although the importance of clear aims cannot be overstated, most experienced presenters seem to agree that it is only secondary to the human factor.

Which brings us to the second question we should all be asking ourselves at the planning stage: Who are the audience? …(4) What you say has to be appropriate not only to your aim, but also to your audience.

Therefore, it is always a good idea to find out as much as you can about the audience well before you face them. …(5) You can also anticipate how much they already know about your topic, and so pitch your talk at the right level.

Finally, never underestimate the importance of the physical environment in which you will deliver your talk. …(6) Walking around the room where your talk is going to be will help you focus on your audience rather than on your surroundings. This also gives you the chance to check that all the equipment you need is there, and in working order.

1. A presentation cannot be successful unless it takes the needs and interests of the audience into account.
2. Having a clear objective in view enables you to map out the most convenient route to get to your destination.
3. Once you have established that, you can prioritise your material.
4. In addition, make sure you plan carefully how you are going to introduce yourself.
5. It will also affect the manner in which we choose to deliver our talk.
6. Most presenters feel more relaxed if they have had the opportunity to go to the conference venue beforehand.
7. Of course, it is better to plan in advance when you want to deal with questions.
8. With such information, you can tailor both the style and the content of your talk to your audience's expectations.

B. Rick Evans is head of marketing for ElexCo, an electronics company that distributes cars parts. Look at the first slide below from his presentation. What is he going to talk about?

1. Facts

- 3,201 deaths on the roads in the UK
- 28, 954 serious injuries
- 560 deaths caused by drink-driving

C. Look at the next three slides from Rick's presentation. Match slides 1-4 (including the slide in B) with extracts a-d from the presentation, and complete the presentation extracts a-d with the sentences below.

1. I'll start by giving you a few statistics.
2. Let's look at how these gadgets operate.
3. I'll come back to this in just a moment.
4. In particular, I'd like to draw your attention to

2. Outline • Efficiency • Installation • Pricing	b. ...(2) 3,000 people die on the road. Of those, some 500 deaths are caused by drink. Admittedly, in Britain drivers may drink some alcohol. Nonetheless, people continue to drink heavily and drive. So, with this in mind, we need to take the onus off the driver who drinks.
3. Sensors • Steering wheel monitor • Eye camera • Steering pattern sensor	
4. Efficiency • Measures alcohol in sweat • When alcohol level high, car won't start • Doesn't work through gloves	c. As far as the steering wheel sensor is concerned, it's one of the most effective devices currently on the market. ... (3) its simplicity: it merely detects levels of alcohol from the sweat in the driver's hands. It is true that it doesn't work through gloves. However, each car will also have other sensors. As a result, the whole package prevents drink-driving.
a. These devices either stop the car, or won't let it start. First or foremost is the	

steering wheel monitor. This detects alcohol in sweat. The camera detects eye movement. Last but not least, we have a device that monitors steering patterns. ... (1)	d. In my talk, I'll be telling you about a variety of sensors. Besides this, I'll also talk about installation. As regards pricing, ...(4).

D. Study Language box and look again at extracts a-d. Can you explain the words in bold?

Language box

We use connectors and sequence markers to signal relationships between ideas. If you are giving a persuasive presentation, the following structure can be an effective way of presenting a counter-argument.

(Make a point) -> introduce a counter-argument -> oppose the counter-argument -> give reason / result / consequence:

It is true that employees' salaries have not increased over the past two years. However, a number of other benefits have been introduced. As a result, the overall package is significantly more attractive.

When giving a presentation, certainly it's important to answer questions, but you must stay focused. In short, listen to questions, but move on, and don't get sidetracked.

You can also use a three-part pattern to discuss a problem and suggest a solution:

Admittedly, errors have occurred in final documents. Nonetheless, we do have a pool of proofreaders, so please ensure that all work is passed to them for final checks before publication.

E. Complete the text using the words and expressions in the box.

admittedly	as regards	as a result	be that as it may
first and foremost		last but not least	

Alternatives to petrol

...(1) are the purely electric cars. It is true that these have zero emissions, and in the UK they are free of road tax. ...(2), these cars are really only good for the city or town as batteries can only provide around 80 km of driving.

...(3) hybrid cars (using petrol and electricity), the electric part of the engine is best in stop-start city traffic, while the petrol engine is efficient over longer distances. On-board recharging is also possible. ...(4), perhaps these cars are the best option, although, unfortunately, they are not the cheapest.

...(5) are cars which run on gas. These are easy to top-up, and fuel costs are only about half of regular petrol prices. ...(6), it will cost you around €2,500 to convert your car to gas.
